METHOD AND APPARATUS FOR READING AND WRITING TO SOLID-STATE MEMORY

Abstract of the Disclosure

5

A method and apparatus for writing to solid-state memory is provided herein. In particular, a controller is provided that monitors operating parameters of each die within the system. In order to enable fast, real-time write operations, feedback from each die is analyzed and compared with a stored set of operating parameters. Based

10   on this comparison, a particular die is chosen for write operations such that system performance is optimized.
